

ON THE BANKS OF THE HUMBER
ARCHAEOLOGICAL AND PALAEOENVIRONMENTAL
INVESTIGATIONS AT GOXHILL, NORTH LINCOLNSHIRE,
AND PAULL, EAST YORKSHIRE, 2016-2020

Richard A Gregory, Stephen Rowland, Mairead Rutherford,
and John Zant

Contributions by

Enid Allison, Nigel Cameron, Chris J Carey, Antony Dickson, Denise Druce, Julie Dunne,
Richard P Evershed, H G Fiske, Christine Howard-Davis, Charlotte L Howsam, Vickie Jamieson,
Richard Macphail, Julia Meen, Gwladys Monteil, Adam Parsons, Ian M Rowlandson, Ian Smith,
John E Whittaker, and Jane Young

Illustrations by

Adam Parsons, Marie Rowland, and Maranda Wareham

APPENDIX 1: PREHISTORIC AND ROMAN POTTERY

APPENDIX 2: ORGANIC RESIDUE ANALYSIS

APPENDIX 3: INSECTS AND OTHER INVERTEBRATES

List of Illustrations

Figures

1	The location of the pipeline and the sites of the Above Ground Installations at Goxhill and Paull	xiv
2	Solid and superficial geology at Goxhill and Paull.....	3
3	Cropmarks, geophysical anomalies, and archaeological trial trenches at the Goxhill AGI and its environs ..	4
4	Archaeological trial trenches along the Soff Lane diversion	6
5	Archaeological trial trenches at the Paull AGI	7
6	The open-area excavation trench and watching-brief area along the Soff Lane diversion, Goxhill.....	8
7	The open-area excavation trenches, watching-brief areas, and borehole transect in the main construction area, Goxhill.....	9
8	The watching-brief area and borehole transect at the Paull AGI.....	13
9	The form and disappearance of Doggerland	22
10	Palaeogeographical reconstructions for the Humber Estuary during the later Mesolithic and earlier Neolithic periods.....	24
11	Palaeoenvironmental sites mentioned in the text	25
12	Location of the borehole cores at Paull and Goxhill selected for palaeoenvironmental analyses	27
13	The lithostratigraphic sequence recorded at Paull.....	29
14	The OxCal age/depth model indicating the dates of the Lower Peat, Middle Peat, and Upper Peat layers in BH-H, Paull	30
15	The lithostratigraphic sequence recorded at Goxhill.....	32
16	Pollen percentage diagram for the peat units and surrounding deposits in BH-H, Paull.....	35
17	Non-pollen palynomorph percentage diagram for the peat units and surrounding deposits in BH-H, Paull	37
18	Pollen percentage diagram for the Lower Peat and overlying deposits in BH-11, Goxhill	42
19	Non-pollen palynomorph percentage diagram for the Lower Peat and overlying deposits in BH-11, Goxhill.....	44
20	Pollen percentage diagram for the Upper Peat and surrounding deposits in BH-11, Goxhill.....	46
21	Non-pollen palynomorph percentage diagram for the Upper Peat and surrounding deposits in BH-11, Goxhill	47
22	Palaeochannel 6088 and East Halton Beck	48
23	The prehistoric tidal creek in the main construction area	50
24	Palaeogeographical reconstructions for the Humber Estuary during the later Neolithic period and Bronze Age.....	53
25	The palaeochannels in Areas B and C and distribution of artefacts associated with Late Neolithic and Bronze Age activity.....	54
26	Pit 6081 and the distribution of prehistoric lithics in Area A/Soff Lane diversion.....	55
27	The flint awl from Area A and the retouched blade-like flake from Area C.....	56
28	Earlier prehistoric lithic sites mentioned in the text	57
29	Earlier Iron Age features in Area A.....	58
30	Potential Late Pre-Roman Iron Age ‘tribal’ territories surrounding the Humber Estuary, and Iron Age sites mentioned in the text.....	60
31	The initial (Phase LIA.I) Iron Age settlement	63
32	The coarse stone tool from ring-gully 3161	65
33	The later (Phase LIA.III) Iron Age settlement	66
34	The sequence of roundhouses in the later settlement	68
35	Roman military sites, roads, and rural settlements in North Lincolnshire mentioned in the text	78
36	The extent of the Romano-British settlement in the main construction area	81
37	The Romano-British (Phase RB.I) open settlement	82
38	The Romano-British (Phase RB.I) roundhouses in Area C	83
39	The Romano-British (Phase RB.I) roundhouse and trackway in Area B	85
40	The sub-rectangular gullies associated with the open settlement (Phase RB.I).....	87
41	Settlement features (Phase RB.I) on the ‘island’ and in the area to the west	89
42	The coarse-stone tools from ring-gullies 3227 and 3242	93
43	A grey ware bowl or dish and a transitional ware jar from the open (Phase RB.I) settlement	94
44	The enclosed settlement (Phase RB.II) in Area B.....	99
45	A grey ware bowl and jar, and transitional ware jars from the enclosed settlement.....	102
46	A rock-tempered ware jar from palaeochannel 2305	103

47	Pollen diagram for deposit 2407 in ditch 2427	104
48	The extent of the excavated later (Phase RB.III) rectilinear enclosure system and settlement.....	106
49	Plan of Trench 35 and the sections across the two (Phase RB.III) enclosure ditches and gully	107
50	Plan of Trench 36 and the sections across the two (Phase RB.III) enclosure ditches	108
51	The later (Phase RB.III) rectilinear enclosures in Areas B and C	110
52	The entrance for Enclosure 15 and Building 4.....	111
53	The pits in Enclosures 6, 9, and 15.....	114
54	The Romano-British (Phase RB.III) field boundaries in Area C and the PP Trench	114
55	The chalk disc from the later Romano-British settlement (Phase RB.III).....	115
56	A transitional ware jar and oversized bowl.....	117
57	A Crambeck grey ware wide-mouthed bowl, a burnished grey ware wide-mouthed jar, and a miscellaneous grey ware carinated jar or beaker	118
58	A shell-gritted Dales wear lid-seated jar	119
59	The shell-gritted 'proto Dales ware' jar used as a cremation urn.....	119
60	Pollen diagram for enclosure ditch 2049	123
61	Pollen diagram for enclosure ditch 3066	125
62	Section across ditch 2056 , showing the position of the analysed soil monolith	129
63	The organic content (LOI) and CO ₃ data (%) for deposits 2038 , 2039 , and 2040 in ditch 2056	130
64	The iron (Fe) and calcium (Ca) data (mg/k) for deposits 2038 , 2039 , and 2040 in ditch 2056	130
65	Section across ditch 2635 , and its recut, and midden layer 2576 (Phase RB.III), showing the position of the analysed soil monoliths.....	131
66	The organic content (LOI) and CO ₃ data (%; monolith 870) for deposits 2577 and 2576 , associated with ditch 2635	132
67	The calcium (Ca), potassium (K), sodium (Na), phosphorous (P) data (%) for deposits 2577 and 2576 , associated with ditch 2635	133
68	The lead (Pb), arsenic (As), zinc (Zn), and copper (Cu) data (%) for deposits 2577 and 2576 , associated with ditch 2635	133
69	Section across ditch 3377 , showing the position of the analysed soil monolith	134
70	The posterior-density estimates for Romano-British settlement	138
71	The areas containing medieval and post-medieval remains at Goxhill.....	140
72	Medieval sites mentioned in the text	142
73	The organisation of the medieval landscape in the Goxhill parish	144
74	Anglo-Saxon vessels from Areas A and B.....	145
75	Medieval archaeology in Area A	147
76	The medieval (Phase M.I) trackways and enclosures.....	148
77	The reconfigured (Phase M.II) medieval enclosures and associated structures.....	149
78	Gully 1017	151
79	The medieval (Phase M.III) pits and the recut boundary for Enclosure 19.....	152
80	Stone objects from medieval features in Area A	154
81	The Norse bell	155
82	The Late Saxon-type wares from Area A.....	156
83	The posterior-density estimates for ditch 1166 (Phase M.I) and gully 1159 (Phase M.II).....	166
84	The post-medieval landscape in the Goxhill parish, as depicted on nineteenth-century mapping.....	169
85	The post-medieval field boundaries along the Soff Lane diversion, superimposed on the First Edition OS mapping	170
86	The post-medieval ditch and pit in Area C and the PP Trench, superimposed on the First Edition OS mapping	171
87	The post-medieval trackway and boundaries in Beta Field, superimposed on the First Edition OS mapping	172
88	The chronology and character of the estuarine landscapes at Paull and Goxhill	174
89	The Iron Age open settlements at Goxhill.....	179
90	Excavated Iron Age roundhouses from North and South Killingholme, and Immingham	181
91	Possible source areas of Iron Age imported pottery (or tempering materials) identified at Goxhill, and possible trading settlements.....	182
92	The Romano-British open settlement (Phase RB.I)	184
93	Possible source areas of Romano-British pottery used in the Romano-British open settlement	185
94	The Romano-British enclosed settlement (Phase RB.II)	186
95	The later Romano-British settlement (Phase RB.III)	188

96	The extent of later Romano-British settlement at Goxhill.....	191
97	Areas of ancient (medieval) enclosure at Goxhill, superimposed on the First Edition OS mapping.....	194
98	The tenth-century activity (Phase M.I) in the Soff Lane diversion, superimposed on the First Edition OS mapping	195
99	Mid-/late tenth- to eleventh-century activity (Phase M.II) in the Soff Lane diversion	197
100	The drainage gullies defining the possible medieval hovels in the Soff Lane diversion	198
101	Mid-twelfth- to fourteenth-century activity (Phase M.III) in the Soff Lane diversion	199
102	Select types of grey ware in the Roman pottery assemblage.....	Appendix 1
103	Select types of transitional wares in the Roman pottery assemblage.....	Appendix 1
104	Partial gas chromatograms of trimethylsilylated FAMES	Appendix 2
105	Scatter plot showing $\delta^{13}C$ values for the C16:0 and C18:0 fatty acids.....	Appendix 2
106	Scatter plot showing the $\Delta^{13}C$ ($\delta^{13}C_{18:0} - \delta^{13}C_{16:0}$) values	Appendix 2
107	Comparison of the mean lipid concentrations (ug g ⁻¹).....	Appendix 2

Plates

1	The estuarine landscape at Goxhill	1
2	The watching brief at the Paull AGI in progress, with the estuarine landscape in the background.....	2
3	Cropmarks at the Goxhill AGI	5
4	Excavating an evaluation trench at the northern end of the Soff Lane diversion	7
5	Excavating Area A, at the northern end of the Soff Lane diversion	9
6	Excavating Area C, east of East Marsh Road	10
7	The archaeological supervision of the mechanical stripping of topsoil in Area B	11
8	Excavation of archaeological features in Area B	11
9	Taking bulk samples from a palaeochannel in Area B	12
10	Extracting soil monoliths from a Romano-British ditch in Area C.....	13
11	The tracked borehole rig extracting cores at Paull.....	14
12	A section across palaeochannel 3183 , looking south-east.....	51
13	A section through palaeochannel 3176 , looking approximately north-west	51
14	Ditches 1119 and 1034 partially excavated, looking north-west	59
15	Overhead view of ring-gully 3353 , partially excavated	64
16	Roundhouse 3312 , Area C, looking north	67
17	The intercutting gullies for Roundhouses I-IV, Area C, looking north.....	67
18	Photomicrograph of natural 3003 and the overlying muddy brown clayey sediments (3035) in ring-gully 3454	69
19	Photomicrograph of natural 3003 , under OIL	69
20	Photomicrograph of deposit 3035 , under OIL.....	69
21	Photomicrograph of the layered and laminated alluvium (3194) in palaeochannel 3198	70
22	Photomicrograph of the layered and laminated weakly silty clays (3179) in palaeochannel 3180	71
23	Photomicrograph of a calcitic microfossil in alluvium 3179 , in palaeochannel 3180	71
24	Photomicrograph of the possible foraminifera in alluvium 3179 , in palaeochannel 3180	71
25	Roundhouse 3227/3237 , Area C, looking west.....	84
26	Roundhouse 3242 , Area C, looking north-west.....	84
27	Roundhouse 2225/2385 , Area B, looking north-east	86
28	Sub-rectangular gully 3241 before excavation, looking north-east	86
29	Sub-rectangular gullies 3366 and 3367 , cutting the gully (3340) for an earlier roundhouse	88
30	Sub-rectangular gully 3241 partly excavated, overhead view	88
31	Photomicrograph of the natural (3003) and overlying coarse silts and loamy coarse silt sediments (3603), in gully 3606	90
32	Photomicrograph of deposit 3603 , in gully 3606	91
33	Photomicrograph of deposits 2311 , 2312 , and 2313 , in gully 2225/2385	91
34	Photomicrograph of deposit 3603 in gully 3606 , under OIL	92
35	Photomicrograph of charcoal-rich deposit 2512 in ditch 2658	92
36	Photomicrograph of microlaminated clayey infill in ditch 2658	92
37	A section across ditch 2073 , looking north-west	100
38	Roundhouse gullies 2370 and 2459/2559 , looking north-east.....	100
39	Photomicrograph of eroded blackened organic soil in ditch 2357 , with embedded small mammal tooth	105
40	Cremation burial in ditch 3505	108

41	Construction trench 3643/3608, prior to excavation, looking south-west.....	109
42	The eastern perimeter ditch (2635) of Enclosure 10, looking south-east.....	113
43	Photomicrograph of the silty clay deposits in ditch 2056.....	130
44	Photomicrograph of the silty clay deposits in ditch 2148.....	131
45	Photomicrograph of midden layer 2576 (monolith 870).....	132
46	Photomicrograph of deposits 3234 and 3233 in ditch 3377.....	134
47	Photomicrograph of deposit 3233 in ditch 3377.....	135
48	The fourteenth-century gatehouse at Thornton Abbey.....	143
49	The medieval two-storeyed building at Goxhill Hall.....	145
50	Medieval features in Area A, prior to excavation, looking west.....	146
51	Section across enclosure ditches 1121 and 1122, looking north.....	150
52	Section across gully 1159, looking east, showing its dark, charcoal-rich fill.....	150
53	Pit 1129 (Phase M.III) cutting enclosure ditch 1121 (Phase M.II), looking north-east.....	153
54	Section across ditch 1345, looking east, showing charred wood fragments and other organic materials in the lower fills.....	153
55	The Norse bell.....	155
56	Photomicrograph of deposits 1291 and 1289 in ditch 1121.....	163
57	Photomicrograph of deposit 1128 in pit 1129.....	163
58	Photomicrograph of charred ('popcorned') cereal in pit 1129.....	164
59	Photomicrograph of deposits 1237, in pit 1238, and 1235, in pit 1236.....	164
60	Photomicrograph of deposit 1237 in pit 1238.....	165
61	Photomicrograph of deposit 1233 in pit 1234.....	165
62	Hazel woodland, which may have been similar to that surrounding Paull in the Mesolithic period.....	176
63	A ring gully defining a roundhouse (3242; Phase RB.I), looking north-west.....	180
64	A sub-rectangular gully (3241) in the Romano-British open settlement (Phase RB.I), looking north-east.....	185

Tables

1	Radiocarbon dates from peat deposits in the borehole cores from Paull.....	31
2	Radiocarbon dates from peat deposits in the borehole cores from Goxhill.....	33
3	Pollen zonation and assemblage characteristics for BH-H, Paull.....	36
4	Diatoms in sample D20.....	38
5	Diatoms in samples D18 and D19.....	39
6	Diatoms in sample D15-D17.....	40
7	Pollen zonation and assemblage characteristics for BH-11, Goxhill.....	43
8	The diatoms recorded at the peat/alluvium interface in palaeochannel 2305.....	52
9	Worked flint by site, provenance, and type.....	54
10	Charcoal from the Early Bronze Age features on the Soff Lane diversion.....	56
11	The characteristics of the ring gullies from the early (Phase LIA.I) settlement.....	64
12	The characteristics of the ring gullies from the later (Phase LIA.II) settlement.....	68
13	Waterlogged plant remains from palaeochannel 2650, Area B.....	72
14	Statistics for the analysed Coleoptera assemblage from palaeochannel 2650, Area B.....	73
15	The handmade (calcareous-gritted) pottery from the later (Phase LIA.II) settlement.....	74
16	Animal bone from the later (Phase LIA.II) settlement.....	75
17	Animal bone from the palaeochannels adjacent to the later (Phase LIA.II) settlement.....	75
18	The characteristics of the sub-rectangular gullies from the open settlement (Phase RB.I).....	89
19	Stratified pottery from the open settlement (Phase RB.I).....	93
20	The grey ware pottery fabrics associated with the open settlement (Phase RB.I).....	94
21	The transitional ware pottery fabrics associated with the open settlement (Phase RB.I).....	95
22	Charred plant remains from ring-gully 2225/2385.....	96
23	Animal bone from palaeochannel 2305 and the open settlement (Phase RB.I).....	98
24	Stratified Roman pottery from the enclosed settlement (Phase RB.II).....	101
25	The Roman pottery fabrics first appearing in the enclosed settlement (Phase RB.II).....	102
26	Animal bone from the enclosed settlement (Phase RB.II).....	105
27	Summary of the later (Phase RB.III) rectilinear enclosures in Areas B and C.....	111
28	The dimensions of the ditches defining the later (Phase RB.III) rectilinear enclosures.....	112
29	Stratified Roman pottery from the later (Phase RB.III) Romano-British settlement.....	116
30	The Roman pottery fabrics first appearing in the later (Phase RB.III) Romano-British settlement.....	117

31	Animal bone from the later Romano-British settlement (Phase RB.III)	120
32	Charred plant remains from layer 2467 and pit 2428	121
33	Pollen assemblages from the later Roman enclosure ditches 2049 and 3066	124
34	Waterlogged plants, and other remains, from the later Romano-British enclosure ditches, Area C.....	127
35	Statistics for the analysed Coleoptera assemblage from ditch recut 3503 , Trench 35.....	128
36	The radiocarbon dates from the open settlement (Phase RB.I)	135
37	The radiocarbon dates from the enclosed settlement (Phase RB.II)	136
38	The radiocarbon dates from the later Romano-British settlement (Phase RB.III)	137
39	Posterior-density estimates for key parameters in the chronological model for Romano-British settlement	139
40	The medieval pottery fabric types from Area A	156
41	Animal bone from medieval features in Area A	158
42	Cereal grains and chaff from medieval features in Area A	159
43	Additional medieval cultivars from features in Area A.....	160
44	Weed seeds from medieval features in Area A.....	160
45	Radiocarbon dates from Phase M.I features in Area A	165
46	Stratified medieval pottery from Phase M.I features in Area A.....	166
47	Radiocarbon dates from Phase M.II features in Area A	167
48	Stratified medieval pottery from Phase M.II features in Area A	167
49	Radiocarbon dates from Phase M.III features in Area A.....	167
50	Stratified medieval pottery from Phase M.III features in Area A	168
51	Identified Samian fabrics	Appendix 1
52	Samian fabrics and forms from Area B, by minimum number of vessels.....	Appendix 1
53	Roman pottery by fabric group.....	Appendix 1
54	The types of grey ware recorded in the Roman pottery assemblage	Appendix 1
55	The sherds selected for organic residue analysis	Appendix 2
56	Lipid concentrations and total lipid concentration in extract values from the Goxhill samples....	Appendix 2
57	The $\delta^{13}C$ and $\Delta^{13}C$ values, and attributions of pottery lipid residues from the Goxhill samples ...	Appendix 2
58	Insects and other invertebrates recorded from the analysed samples	Appendix 3

Summary

Between 2016 and 2020, several archaeological and palaeoenvironmental investigations were undertaken across two areas of landscape on the northern and southern sides of the Humber Estuary, respectively at Paull (NGR TA 1749 2629), East Yorkshire, and Goxhill, North Lincolnshire (NGR TA 1006 2184). The stimulus for these investigations was the replacement of the Number 9 Feeder Gas Transmission Pipeline, which was constructed by National Grid and the Humber Pipeline Tunnel Joint Venture to reinforce their National Transmission System.

The earliest evidence recovered by the project relates to the Mesolithic and earlier Neolithic landscapes that existed in the estuary, comprising palaeoenvironmental and geoarchaeological data obtained through borehole coring at both Goxhill and Paull. This allowed for both the terrestrial environment and changes in sea level to be discerned across the earlier and middle phases of the Holocene, which formed a dynamic period when mainland Britain was in the process of separating from Continental Europe, as rising sea levels gradually submerged the former land bridge joining these two landmasses.

All of the archaeological evidence was confined to Goxhill, on the southern side of the estuary. Detailed analysis indicates that this area was visited, probably by peripatetic groups, during the Bronze Age, with the first evidence for more permanent settlement dating to the Early Iron Age. During this period, it seems that an area to the south-east of Goxhill village was managed and divided, perhaps to facilitate and regulate the movement of livestock around the landscape.

Good evidence was also obtained for later Iron Age settlement, within an excavated area to the north-east of Goxhill village. This initially comprised an unenclosed roundhouse settlement established in the latter centuries of the first millennium cal BC, adjacent to a tidal creek. It was followed by a second phase of Iron Age activity, which again related to an unenclosed roundhouse settlement in the same area, occupied into the terminal stages of the Iron Age, just prior to the Roman conquest, with livestock farming seemingly forming the main economic pursuit. Settlement in this area continued following the Roman conquest, as evidence of a third open settlement, containing roundhouses, was recorded, dating to the mid-/late first century AD. Settlement, however, appears to have expanded during this period and was also characterised by a series of sub-rectangular structures that may have functioned as hayricks. These remains, together with the palaeoenvironmental evidence, seem to suggest that pastoralism continued to represent an important economic concern, though in tandem with arable farming. Two subsequent phases of Roman settlement were also evident in this same area. The first, established in the early second century, was characterised by a series of circular and conjoined enclosures, some containing roundhouses, with the economy again based on mixed farming. During the later Roman period, in the late second/early third century, the settlement was then transformed, with a series of rectilinear enclosures being created across a large swathe of the landscape, emanating out from a settlement core. This settlement was engaged in mixed farming, though perhaps with a greater range of crops and livestock being exploited than previously. It also appears to have been more 'Romanised' in character, containing rectilinear timber buildings and receiving some imported Roman goods. Moreover, salt working also formed an element of the settlement's economy, which was perhaps undertaken at Goxhill for the first time in the later Roman period.

Very limited evidence for post-Roman activity was recovered (in the form of three unstratified sherds of fifth- to seventh-century pottery), though good evidence for later medieval activity was present in an area, south-east of Goxhill village, excavated prior to the construction of a road diversion. The evidence indicates three phases of medieval activity, dating between the tenth and mid-fourteenth centuries. It seems to relate to an area of medieval enclosure running south from Church Side, a road running out from the south-eastern side of the modern village, and was perhaps also associated with domestic dwellings originally situated on the street frontage. The evidence included trackways, enclosure boundaries, small structures, and rubbish pits, which may relate to a period when the medieval settlement had reached its maximum extent, prior to contraction in the mid-fourteenth century, possibly as a result of climate change or the ravages of the Black Death.

Acknowledgements

The archaeological investigations undertaken as part of the replacement of the Number 9 Feeder Gas Transmission Pipeline project owe their success to many individuals and also to the close co-operation of the different organisations involved with the project. Oxford Archaeology would like to thank Arcadis, National Grid, and the Humber Pipeline Tunnel Joint Venture, for commissioning the various stages of the project. For their liaison, organisation, and assistance with the project, both on and off site, Oxford Archaeology is especially grateful to Daniel Evans, Jenny Wylie, Kate Burrows, Helen Travers, and Lara Bishop of Arcadis; Sam Brewitt, Ruth Finlayson, Callum Fryer, Paul Hammond, Peter Lee, Joseph Marsh, Martin Somers, and Kevin Mara of the Humber Pipeline Tunnel Joint Venture; and Bryony Brown, Derek Cater, Allen Cartmell, Chris Clement, Steve Ellison, Brian McPhee, Paul Neary, and Tony Robertson of National Grid. Thanks are also extended to Alison Williams, Archaeological Advisor to North Lincolnshire Council, for her advice during the fieldwork.

The fieldwork was directed by Becky Wegiel with the assistance of Jeremy Bradley, Paul Dunn, Andrew Frudd, and Aidan Parker. They were supported by Alex Batey, Tom Broomfield, Steve Clarke, Tommy Dew, Emma Fishwick, Miranda Haigh, James Hodgson, Shanice Jackson, Vickie Jamieson, Rowan Kendrick, Hannah Leighton, Debbie Lewis, Meaghan Mackie, Andrew McGuire, Jon Onraet, Lynette Parkinson, Paul Simkins, Ben Sorrill, and Mike Tennant. The geoarchaeological coring, supervised by Mairead Rutherford, was undertaken by ESG, under the management of Neil Cooke.

Post-excavation analysis and publication of the archaeological and palaeoenvironmental data has benefited from the work of many individuals. These include numerous members of staff from Oxford Archaeology, who undertook the analysis of the stratigraphic remains (Richard Gregory and John Zant), artefacts (Antony Dickson and Adam Parsons), palaeoenvironmental materials (Denise Druce, Julia Meen, Mairead Rutherford, and Ian Smith), and human remains (Vickie Jamieson), as well as documentary research (Charlotte Howsam). Several external specialists have also been instrumental to the success of the project, through their analysis of artefacts (Julie Dunne, Richard P Evershed, H G Fiske, Christine Howard-Davis, Gwladys Monteil, Ian Rowlandson, and Jane Young), soils (Chris J Carey and Richard Macphail), and palaeoenvironmental remains (Enid Allison, Nigel Cameron, and John Whittaker). The historical maps used in this volume (Figs 84-7, 97-9, and 101) have been supplied by the National Library of Scotland and permission to use these is gratefully acknowledged. In addition, thanks are also extended to Historic England for permission to reproduce an aerial photograph (Pl 3) and cropmark transcriptions. One of the images (Pl 1) is a photograph in the public domain (under the Creative Commons Licence, taken by Chris @ www.geograph.org.uk). More generally, the fieldwork and post-excavation process have been greatly assisted by Stephen Rowland (Senior Project Manager), who provided project management for both elements of the project, and Richard Newman (formerly Principal Archaeologist, Humber Archaeology Partnership) and Alison Williams who kindly reviewed and provided valuable comments on draft elements of this volume.
